“Research is creating new knowledge” — Neil Armstrong

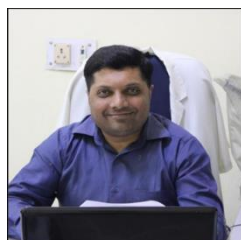

Past year has seen many changes and many upgrades. Research organizations and esteemed universities have come up with protocols for conduct of ethical research in India. Government is taking a keen interest in standardizing research methodology and has brought about many memorandums and gazettes. All this to shape India as a one some research unit. We need to understand and follow ethical research guidelines.

Dear friends, I am happy to release another issue of our journal. This issue touches upon important aspects of health care diagnostics, viz pancreatic lesions, urothelial neoplasms and CNS lesions. Soft tissue lesions have always been a grey zone for diagnosis, and this issue highlights some very important aspects.

Various case reports detailed in this issue are interesting and worth reading. I must congratulate all our authors for their contribution to the current issue.

I convey my regards to our publishers for doing a fantastic work and hope that our readers continue to give us much needed support.

God Bless All.

Dr. Nitesh Mohan
