Editor Desk

From the Editor-in-Chief's Desk

Welcome to the latest edition of our journal on diagnostic pathology and oncology. We are delighted to present a collection of insightful articles that highlight the ongoing progress and challenges in these crucial fields of medical science.

The present issue features a very interesting article on nanotechnology which has emerged as a promising frontier in cancer research, offering innovative solutions for both diagnosis and treatment.

It also features an article on autopsy which remains a cornerstone in understanding the complexities of human disease.

Axillary Reverse Mapping (ARM) has emerged as a valuable approach in Modified Radical Mastectomy (MRM). With the application of the dual dye Indocyanine Green (ICG) and Methylene Blue (MB), the lymphatic drainage pathways of the upper extremity can be preserved to prevent lymphedema, a debilitating complication of axillary lymph node dissection. The article on ARM delivers a comprehensive take on this technique on anatomical mapping.

In this issue, you will find a diverse range of case reports and other articles which deal with interesting, well-worked-up cases and deliver important take-home messages.

I express my sincere gratitude to all our contributors, reviewers, and readers for their dedication and support.

Your commitment inspires us to continue pushing the boundaries of knowledge and innovation in pathology and oncology.

Happy reading...

Dr. Indranil Chakrabarti

MBBS, MD, FIAC
